60 Days of DevOps Challenge

Day 05: Linux User Setup with Non-Interactive Shell

Name: Monisha J R

Department: CSE

Linux User Setup with Non-Interactive Shell

The screenshot shows a web browser window with the URL `engineer.kodekloud.com/task?id=680216e85500bd7ab9a7af8&status=start`. The interface is divided into two main sections: a 'Task' panel on the left and a 'Terminal 1' panel on the right.

Task Panel:

- Text: "To accommodate the backup agent tool's specifications, the system admin team at [xFusionCorp Industries](#) requires the creation of a user with a non-interactive shell. Here's your task:"
- Text: "Create a user named `anita` with a non-interactive shell on [App Server 2](#)."
- Buttons: "Check" and "Try Later".

Terminal 1 Panel:

```
thor@jumppost ~$ ssh steve@stapp02
steve@stapp02's password:
[steve@stapp02 ~]$ sudo useradd -s /sbin/nologin anita

We trust you have received the usual lecture from the local System
Administrator. It usually boils down to these three things:

#1) Respect the privacy of others.
#2) Think before you type.
#3) With great power comes great responsibility.

[sudo] password for steve:
[steve@stapp02 ~]$ getent passwd anita
anita:x:1002:1002::/home/anita:/sbin/nologin
[steve@stapp02 ~]$
```
